Despite having existing data on five of the six xylenol chemicals conducting tests that will kill more animals in the LD50 test plan is irresponsible. The results of the this test plan are predictable and that is; the animals will all die painful horrific deaths for no reason other than to file away the results. Killing animals using massive amounts of chemicals is ridiculous because it has no relevancy to humans.

It is appalling that an industry based on torturing and killing animals is in existence. Furthermore, each person connected with this despicable business should be ashamed of the loss of life, needless suffering, and the incredible waste of money that should instead be spent for credible purposes.
